

ME Test Engineer

Descrição da função

Testing:

Coordinate test tasks with design department

Mechanical Testing

All kind of testing (e.g: Leakage testing, Destructive testing, Prototype measurements, Shape Measurements, Roughness Measurements, Spring characteristic, Sinusoidal Vibration, Random Vibration, Sine-on-Random Vibration, Mechanical shock, Resonance tests)

Reporting:

Create test reports and presentations for customers

Record mechanical measurement data and analyze the results

Analyse technical customer specifications and reliability standards

Prototype assembly (if the case)

Prototyping

Prototype assembly (if the case)

Prototype development - part or subassembly (if the case)

Process

Write and improve work instructions and procedures related to the responsibilities and working area

Presentations

Participation in project teams (provide test requirement information based on reliability know-how)

Planning

Planning, start-up, maintenance and calibration of test equipment

Independent test planning and execution

Maintenance

Maintain specifications

Cooperation with foreign development locations

Coordinate calibration and maintenance activities for the laboratory test equipment

Legal Compliance

To respect the law regarding work and security aspects according to the actual legal legislation (see annex to job profile) and also the Internal Rules, specific Health&Safety working instructions and the operational procedures and working instructions related to OH&S (Occupational Health & Safety) Management System.
