Vehicle Application Engineer

Tus actividades

The Vehicle Application Engineer will support the development, calibration, and validation of Active Safety and Motion Control functions for passenger vehicles. Responsibilities include chassis control systems such as **ABS, TCS, and ESC**, as well as ADAS features including **AEB, ACC, HSA, AVH**, and related driver assistance functions. This role combines hands-on vehicle testing, data analysis, and technical problem-solving to ensure system performance meets internal and customer requirements.

Key Responsibilities:

- Develop, calibrate, and validate Active Safety and Motion Control functions, including ABS, TCS, ESC, AEB, ACC, HSA, and AVH.
- Execute vehicle testing and validation activities according to internal standards and customer specifications.
- Analyze test data, identify performance issues, and support root cause investigations.
- Develop test plans, procedures, and validation reports.
- Support vehicle integration activities and collaborate with systems, software, hardware, and customer engineering teams.
- Document and communicate technical findings, recommendations, and project status.

Tu perfil

Required Qualifications

- Bachelor's degree in Mechanical Engineering, Electrical Engineering, Automotive Engineering, or related field.
- Understanding of vehicle dynamics, automotive control systems, and testing methodologies.
- Strong analytical, troubleshooting, and communication skills.
- Valid driver's license
- Travel to proving grounds and customer locations, primarily within the United States, to support vehicle testing, with anticipated travel of approximately 30–40% and some multi-week assignments.

Key Competencies

- Strong technical aptitude and problem-solving skills.
- Ability to work independently in a vehicle testing environment.
- Attention to detail and ownership of assigned tasks.
- Effective teamwork and customer interaction skills.
- Confidence operating vehicles in dynamic and performance-driving test environments.
- Flexibility to support frequent travel and demanding vehicle development schedules.
