

## Artificial Intelligence Intern [IDA: 00032]

### Jūsų užduotys

This internship focuses on Developing Efficient AI Models in Resource-Constrained Environments, with exciting applications such as:

- Autonomous Driving & Safety Systems - Contribute to AI-powered self-driving, assisted parking, and advanced safety features like emergency braking and fallback systems.
- LLM-based Interactive Cockpit Systems - Develop methods and applications to deploy lightweight Small Language Models on the edge for use-cases such as car cabin controls, or automotive conversational assistants.

### Primary Goals:

- Develop efficient AI models for deployment in resource-constrained automotive environments.
- Explore and implement optimization methodologies for AI models intended for embedded devices and edge platforms.
- Build, modify, benchmark, and improve AI models for real-world automotive use cases, including autonomous driving, and intelligent cockpit applications.
- Investigate methods for deploying lightweight Small Language Models on edge devices for use cases such as car cabin controls and automotive conversational assistants.
- Evaluate the performance, efficiency, and deployment feasibility of developed AI models through testing, benchmarking, and comparison with existing approaches.
- Document project findings, implementation details, evaluation results, and technical recommendations in a clear and comprehensible manner.

This internship provides an excellent opportunity for individuals passionate about Artificial Intelligence, Embedded AI, Computer Vision, Generative AI, NLP, and automotive applications. As part of the AI team in AUMOVIO Singapore, previously Continental Automotive, you will collaborate with AI experts in Singapore and across the globe, gain practical experience in real-world AI deployment challenges, and contribute to AI solutions that support smarter, safer, and more autonomous vehicles.

### Activities:

- Research and analyze the latest AI advancements from top-tier conferences, with a focus on efficient AI models, embedded AI, computer vision, generative AI, and NLP.
- Benchmark, adapt, and improve state-of-the-art AI methods for practical automotive use cases.
- Develop, modify, or use existing AI models for resource-constrained environments.
- Leverage cloud-based model development pipelines to support AI

model development, experimentation, optimization, and deployment.

- Apply model optimization techniques to improve performance, efficiency, and suitability for embedded devices.
- Explore and implement methods for deploying lightweight Small Language Models on the edge for automotive cockpit applications.
- Contribute to AI-powered autonomous driving and safety system applications.
- Compile, deploy, and test AI models or related software on embedded hardware platforms where applicable.
- Conduct experiments and evaluations to assess model performance, resource usage, and deployment readiness.
- Document project progress, methodologies, experiment results, and technical findings in a comprehensive report.
- Prepare and deliver presentations to communicate project outcomes to team members and stakeholders.

## Reikalavimai

- Education - Currently pursuing a bachelor's or master's degree in programmes such as: Computer Science, Artificial Intelligence / Machine Learning, Computer / Electrical Engineering, or a related field. Coursework in AI, Deep Learning, or Computer Vision is highly recommended.
- Technical Skills - Proficiency in Python and familiarity with deep learning frameworks like PyTorch, TensorFlow, or scikit-learn. Willingness to learn and explore new AI concepts.
- Programming Experience - Hands-on experience with machine learning projects (personal, academic, or open-source).
- Hardware Experience (good-to-have) - Hands-on experience with compiling and deploying code onto hardware targets such as SBCs like a Raspberry Pi, or microcontrollers.
- Communication Skills - Ability to clearly document findings and present results to team members. Strong verbal and written communication skills.
- Team Player - A collaborative mindset, openness to learning from experienced professionals, and the ability to work effectively in team-based projects.
- Passion for AI - Genuine enthusiasm for artificial intelligence and machine learning, with a desire to stay updated on the latest advancements in the field.

## Apie mus

Since its spin-off in September 2025 AUMOVIO continues the business of the former Continental group sector Automotive as an independent company. The technology and electronics company offers a wide-

ranging portfolio that makes mobility safe, exciting, connected, and autonomous. This includes sensor solutions, displays, braking and comfort systems as well as comprehensive expertise in software, architecture platforms, and assistance systems for software-defined vehicles. In the fiscal year 2024 the business areas, which now belong to AUMOVIO, generated sales of 19.6 billion Euro. The company is headquartered in Frankfurt, Germany and has about 87.000 employees in more than 100 locations worldwide.
